Subject: A Big Thank You from Nick Wiseman's mother for helping our kids and teachers.

Thank you so so muc Patrick and Steve. So very grateful to you both for doing the right thing.

I know I'm not anything more than a mother concerned for the health of our children and their teachers, but ask yourselves, if you moms had been in my current position, what would they have done? What would you have wanted them to do.

Patrick, you asked me some important questions about the soil yesterday which I did not have the answer, about why I was concerned about the soil, so I hope this helps a little:

RE: EPA Region saying the soil was safe.

The SMMUSD 2010 Environmental Report says otherwise.

For example:

"...Lead was detected in sample SS-PERC-9-10 at a concentration of 304 mg/kg, which exceeded the CHHSL of 80 mg/kg...The estimated cancer risk for the

carcinogenic compounds using the maximum concentrations collected during the PEA is 2×10^{-5} , which is

above the cancer risk target risk management range for school sites of 5×10^{-6} (Table 8 of the PEA report [ARCADIS 2010; Appendix C]). One of the PCBs (Aroclor 1254) was the primary contributor (53%) to the overall carcinogenic risk. Organochlorine pesticides cumulatively contributed 42% to the overall carcinogenic risk. Alpha-chlordane and technical-chlordane were the secondary contributors (9.5% and 27%, respectively) to the overall carcinogenic risk..."

Wishing you and your families a very happy Christmas and New Year. Please tell your moms you gave a lot of mothers great relief yesterday. They should be proud of their sons!
